

Vysyaraju Poorna Chandra Raju

Srikakulam, India — +91-9347550064 — poornachandraraju2004@gmail.com

Profile

I am a Computer Science undergraduate and aspiring Software Engineer with strong problem-solving skills and a solid foundation in java, Data Structures and Algorithms (DSA) and backend development using springboot. Passionate about building scalable applications, solving real-world problems. I have hands on experience using AI tools.

Education

- **B.Tech, ANITS** 2023–2027
CGPA: 8.89
- **Intermediate, Sri Chaitanya College** 2021–2023
Percentage: 96.5
- **Schooling, Keshava Reddy School** 2021
Percentage: 100

Technical Skills

- **Programming Languages:** Java, SQL
- **Backend Development:** Spring Boot, REST APIs, Spring Security, JWT Authentication, OAuth 2.0, RabbitMQ
- **Databases & Tools:** MySQL, Postman, IntelliJ IDEA
- **Engineering Skills:** OOP, OS

Projects

- **AI Powered Resume Analyzer and Job Matching Platform (NEXUS):** GitHub
 - Developed a fault-tolerant ATS evaluator using the Google Gemini API and Resilience4j Circuit Breakers, leveraging Spring @Async and Server-Sent Events (SSE) for real-time, non-blocking analysis streaming.
 - Engineered a scalable Spring Boot backend to extract document text via Apache PDFBox, securely persist PDF resumes directly to AWS S3, and cache external JSearch API data to minimize network latency.
 - Implemented a robust dual-authentication system combining stateless JWTs with Google OAuth2, secured by Spring Security Role-Based Access Control (RBAC) to support administrative monitoring dashboards.**Tech:** Spring Boot, Spring Security, MySQL, JWT, Google Gemini API, RapidAPI
- **SmartRAG-PDF Chat:** GitHub
 - Built a Basic Spring Boot RAG Chatbot which dynamically parse PDFs and perform semantic contextual question-answering via the Google Gemini API.
 - Implemented PostgreSQL with the pgvector extension to execute high-performance Cosine Distance vector similarity searches.
 - Engineered an asynchronous data ingestion pipeline using CompletableFuture and API payload batching, paired with Spring JDBC batch updates to eliminate N+1 bottlenecks.**Tech:** Spring Boot, pgvector, GEMINI API, Spring AI (Basic)
- **Webhook Engine** GitHub
 - Built an asynchronous Webhook Engine using Spring Boot and RabbitMQ to distribute real-time events.
 - Implemented Exponential Backoff and Dead Letter Queues to guarantee reliable delivery during server outages.
 - Secured outgoing webhooks by mathematically signing payloads using HMAC SHA-256 cryptography.
 - Prevented database race conditions and duplicate events using Hibernate Optimistic Locking and strict Idempotency.**Tech:** Spring Boot, RabbitMQ (Message Broker), MySQL, Docker (Basic)

Achievements

- Solved 495 algorithmic problems on LeetCode, strengthening my problem-solving skills.

Certifications

- Java (Basic) – HackerRank
- SQL (Basic) – HackerRank
